

THE APPENDIX FOR
THE UNOFFICIAL
COMBINED RULEBOOK FOR

— BATTLESTAR —
GALACTICA

v2.0

“To live meaningful lives, we must die and not return. The one human flaw that you spend your lifetimes distressing over, mortality, is the one thing that makes you whole.”
— Number Six

CONTENTS

The Unofficial Combined Rulebook Appendix contains the following:

A1. ABOUT THE APPENDIX.....	5
A2. COMPONENTS.....	6
A2.1 Character Sheets.....	6
A2.1.1 Character Clarifications and Errata.....	6
A2.1.1.1 Athena (Cylon Leader).....	6
A2.1.1.2 "Caprica" Six (Cylon Leader).....	6
A2.1.1.3 "Chief" Galen Tyrol.....	6
A2.1.1.4 Ellen Tigh.....	6
A2.1.1.5 Felix Gaeta.....	6
A2.1.1.6 Gaius Baltar (Political Leader).....	7
A2.1.1.7 Gaius Baltar (Support).....	7
A2.1.1.8 Helena Cain.....	7
A2.1.1.9 Kara "Starbuck" Thrace.....	7
A2.1.1.10 Karl "Helo" Agathon (Military Leader).....	7
A2.1.1.11 Laura Roslin.....	7
A2.1.1.12 Lee "Apollo" Adama (Pilot).....	7
A2.1.1.13 Louanne "Kat" Katraine.....	7
A2.1.1.14 Samuel T. Anders.....	7

A1. ABOUT THE APPENDIX

This is version **2.0** of the Appendix for the **Unofficial Combined Rulebook for Battlestar Galactica: The Board Game**. It is intended, and essential, for use together with the rulebook.

The rules in the Appendix are numbered in cases, much like the Combined Rulebook. Note that all rules numbers in the Appendix start with an "A" to make it clear that they are separate from the main rules. Note that hyperlinks to rules cases are only active within the same document.

The Appendix has three main parts; a list of components, including an important section about removed components, the set up rules for the game and several different variants that players may include if they desire.

The variant rules include a number of unofficial additions to the game. Note that these variants may make the game longer or affect the balance of the official game.

A2. COMPONENTS

The following sections describe and identify the different components of the **Battlestar Galactica** game.

To prepare for a game with all expansions, remove the components listed in rule **A2.7 Removed Components**. Where a number of components is indicated below, this assumes that components not used in the combined game are removed. When using these rules all remaining components from all four game boxes are used.

A2.1 CHARACTER SHEETS

Each of the 33 characters (see rule 4. Characters) has a sheet that describes that character's type, special abilities, skill set and setup location. Seven of the characters are Cylon Leaders (see rule 6.2 Cylon Leaders).

The following information can be found on each character sheet.

1. **Name**
2. **Character Type (Political Leader, Military Leader, Pilot, Support or Cylon Leader):** Each character has a type listed on her character sheet. This type only matters during set up, and exists to help players choose a well-rounded group of characters.
3. **Positive Abilities:** Each character has two positive abilities and one negative ability. Some of these abilities are passive (always affecting the character) while others require the player to use them as an action (see rule 8.4 Action Step).
4. **Negative Ability**
5. **Setup Location:** Each character has setup instructions on her card. This usually lists the location where the character is placed at the beginning of the game. Some characters have special instructions (such as "Apollo," whose sheet instructs the player to launch a viper and place him in it as a pilot).
6. **Skill Set:** Each character sheet lists the skills the character has expertise in. At the start of the player's turn, she gains the number and types of Skill Cards listed in her character's skill set. When a character is allowed to draw Skill Cards of an unspecified type, they must be from within her skill set unless specified otherwise.

A2.1.1 CHARACTER CLARIFICATIONS AND ERRATA

The following is clarifications and errata as it applies to Characters:

A2.1.1.1 ATHENA (CYLON LEADER)

Resolute ability: If Athena is Infiltrating and uses her "Resolute" ability to activate the "Human Fleet," she cannot choose to Infiltrate Galactica. If she activates "Caprica" while Infiltrating, she **does** receive an Activate Cylon Ship step. If she activates the "Hub Destroyed" location while Infiltrating, she moves to the "Cylon Fleet" and is no longer Infiltrating. She cannot activate the "Hangar Deck" while in the "Brig."

A2.1.1.2 "CAPRICA" SIX (CYLON LEADER)

Intimate ability: "Intimate" should read: "Intimate – Movement: Draw 1 Skill Card at random from another player's hand. Then, that player draws 1 card from the Skill deck of your choice (it may be from outside his Skill set)."

A2.1.1.3 "CHIEF" GALEN TYROL

Blind Devotion ability: Chief Tyrol may use his "Blind Devotion" ability on a skill check affected by an "Investigative Committee" Skill card. He could even wait until all cards have been added (faceup) to the skill check and then decide to use his ability.

A2.1.1.4 ELLEN TIGH

Politically Adroit ability: Ellen Tigh's "Politically Adroit" ability or the text effect of the "Support the People" Skill Card does not allow a player to draw cards from outside the Skill set. Any time a player draws cards, they must **be from** within his Skill set unless expressly noted otherwise.

Manipulative ability: If, at the end of her turn, Ellen no longer is in possession of the Admiral or President title she gained through the use of her once-per-game ability, she may not return it and so it stays where it is. If the previous title holder becomes ineligible for its return for any reason, Ellen attempts to return it, fails, and the title moves to the character highest in the Line of Succession (which may be Ellen Tigh herself).

A2.1.1.5 FELIX GAETA

Coup ability: If Felix Gaeta uses his "Coup" ability while in Detention on New Caprica, he gains the Admiral title and, if Galactica has not yet returned to orbit he moves to "Resistance HQ." If Galactica has returned to orbit, he moves to "Command" (and does not need to discard any Skill Cards to do so).

FTL Operator ability: If Felix Gaeta wants to use the FTL Operator ability on Karl "Helo" Agathon's turn and Karl "Helo" Agathon wants to use his "ECO Officer" ability, either character's player may reroll the die after the die is rolled. If both wish to, the current player (in this case, the player who is playing Karl "Helo" Agathon), decides who has the first opportunity to reroll the die. Note that if one of the two players rerolls the die, the other will still have an opportunity to reroll the die after that, even if he did not state his intention to do so previously.

A2.1.1.6 GAIUS BALTAR (POLITICAL LEADER)

After Execution: If Gaius Baltar is selected as a new character before the Sleeper Agent phase, immediately add one "You Are Not a Cylon" card to the Loyalty deck, shuffle it, and deal one Loyalty Card to his player. If Gaius Baltar is selected as a new character after the Sleeper Agent phase, he may not use his "Cylon Detector" ability.

A2.1.1.7 GAIUS BALTAR (SUPPORT)

Game Set Up: If a player chooses the alternate version of Gaius Baltar, he does not add an additional card to the Loyalty deck while Creating the Loyalty Deck (see rule A3.8.3 Adjust Loyalty Deck).

A2.1.1.8 HELENA CAIN

Blind Jump once-per-game ability:

Helena Cain's "Blind Jump" ability supersedes the text on the "Assign Mission Specialist" Quorum Card. The "Assign Mission Specialist" card is ignored and remains in play ready for the next time the fleet jumps. Helena Cain cannot use her "Blind Jump" once-per-game ability on New Caprica. "Blind Jump" is no longer usable once Galactica has traveled 7 or more distance. Players who have selected Helena Cain are well advised to use her "Blind Jump" ability earlier in the game, rather than later.

A2.1.1.9 KARA "STARBUCK" THRACE

Expert Pilot ability: If Starbuck starts her turn piloting a viper and moves to Galactica, Pegasus or Colonial One, she does receive two actions.

A2.1.1.10 KARL "HELO" AGATHON (MILITARY LEADER)

ECO Officer ability: If Helo rerolls a die that was modified by a "Strategic Planning" tactics card the reroll also receives +2 to its result.

If Felix Gaeta wants to use the FTL Operator ability on Karl "Helo" Agathon's turn and Karl "Helo" Agathon wants to use his "ECO Officer" ability, either character's player may reroll the die after the die is rolled. If both wish to, the current player (in this case, the player who is playing Karl "Helo" Agathon), decides who has the first opportunity to reroll the die. Note that if one of the two players rerolls the die, the other will still have an opportunity to reroll the die after that, even if he did not state his intention to do so previously.

Stranded ability: If Helo receives a second Mutiny Card (or a third, if he's the Mutineer) while he's "Stranded", he discards down to one Mutiny Card (or two, if he's the Mutineer), but does not move to the "Brig".

After Execution: If Karl "Helo" Agathon is selected, he will count as "Stranded" during his player's next turn, even if it's not the first turn of the game.

A2.1.1.11 LAURA ROSLIN

Terminal Illness ability: If Laura Roslin does not have at least two Skill cards in her hand she cannot activate a location.

A2.1.1.12 LEE "APOLLO" ADAMA (PILOT)

Alert Viper Pilot ability: Lee Adama may use this ability whenever a viper is placed on the game board. This includes (but is not limited to), when a player activates the "Command" location. He may **not** use this ability if he is in the brig, or the viper is piloted by another character.

Headstrong ability: Lee Adama has to use his "Headstrong" ability whenever he is forced to discard cards. This includes discarding down to 10 cards at the end of a player's turn, and when required to do so by a Crisis Card. It does not include when he discards a card to move between ships.

Game Set Up: Apollo may choose to start the game in an Assault Raptor instead of a viper.

After Execution: If Lee "Apollo" Adama is selected as a new character, immediately launch a viper and place him in it as a pilot. If there are no vipers available in the reserves, he is instead placed on the "Hangar Deck."

A2.1.1.13 LOUANNE "KAT" KATRAINE

Hot Shot ability: "Strategic Planning" and other effects that modify die rolls cannot be used in conjunction with Louanne "Kat" Katraine's "Hot Shot" ability.

Stim Junkie ability: "Stim Junkie" should read: Stim Junkie – At the end of your Action step, if you are in the same location or space area that you were in at the start of your turn, you are moved to "Sickbay". This ability does not, however, move her to "Sickbay" if she is in the "Brig" or "Detention".

A2.1.1.14 SAMUEL T. ANDERS

After Execution: If Samuel T. Anders is selected as a new character, his player skips the Receive Skills step of his next turn.

A2.1.1.15 SHARON "BOOMER" VALERII

After Execution: If Sharon "Boomer" Valerii is selected as a new character **before** the Sleeper Agent phase, shuffle one "You are Not a Cylon" Loyalty Card into the Loyalty deck.

If selected after the Sleeper Agent phase, she is immediately placed in the "Brig" and the player who selected her draws an additional Loyalty Card.

If the character she is replacing was executed on a New Caprica location, send her to "Detention" instead.

A2.1.1.16 SHERMAN "DOC" COTTLE

Treatment ability: "Treatment" should read, "Treatment – Action: Choose another human player and draw 2 Skill Cards from his Skill set. Then, give him 2 Skill Cards from your hand."

A2.1.1.17 TOM ZAREK (POLITICAL LEADER)

Friends in Low Places ability: Tom Zarek's "Friends in Low Places" ability affects both the "Brig" and "Detention" locations. All abilities that affect the "Brig" location affect "Detention" while that character is on New Caprica. So,

Tom Zarek can modify the difficulty of the “Detention” skill check only while he is on New Caprica himself.

A2.1.1.18 TOM ZAREK (MILITARY LEADER)

After Execution: If he chooses the alternate version of Tom Zarek as his new character, he must immediately draw a Mutiny Card.

A2.1.1.19 TORY FOSTER

Adaptable ability: Tory Foster can use her “Adaptable” ability when a player uses the President’s Office to play a Quorum Card. Each Quorum Card has an action listed on it. Anytime that action is resolved, Tory Foster may use her “Adaptable” ability. Things that may cause the action on a Quorum Card to be resolved include using the President’s Title Card, using the President’s Office location ability, resolving the benevolent result of Aaron Doral’s Ally Card, or using Laura Roslin’s “Skilled Politician” ability. Note that in a case such as the “Assign Mission Specialist” Quorum Card, the “Adaptable” ability only applies when the card is given to another player, not when that player who received the card uses it (since the latter is not an action).

A2.2 GAME BOARDS

For a full diagram of the game boards, see [Game Board Breakdown](#).

A2.2.1 MAIN GAME BOARD

The main game board is where most of the action of the game takes place. It depicts the locations on Galactica and Colonial One, as well as the areas of space surrounding them.

Galactica is the large ship that leads and defends the human fleet, and is depicted in the center of the main game board.

There are many locations on Galactica where characters can take different actions. Colonial One is a smaller ship than Galactica and is the President’s base of operations. There are several locations on Colonial One where characters can take different actions.

A2.2.1.1 RESOURCE DIALS

The four resource dials are used to track the dwindling resources of the humans. They are attached to the main game board using the plastic connectors. Once attached, they should not be removed. The number a given dial shows represents how much of that particular resource is available at that time. When a resource is lost or gained for any reason, its dial is rotated to indicate the new total. If any resource is reduced to zero (at the end of a player’s turn), then the human players lose the game.

A2.2.2 CYLON LOCATION OVERLAY

This large overlay (from the Daybreak expansion) is placed over the Cylon locations of the main game board. The new locations on the overlay are used

instead of the Cylon locations on the original board. Pay careful attention to how these locations have changed (for example, the “Resurrection Ship” is a Hazardous location).

A2.2.3 COLONIAL ONE OVERLAY

This overlay replaces the Colonial One locations used in the base game of **Battlestar Galactica: The Board Game**. If Colonial One is destroyed, flip the overlay.

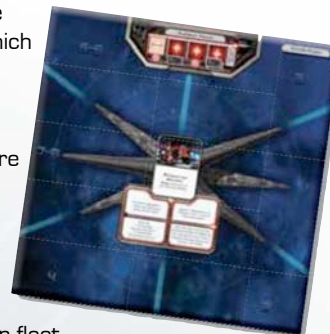

A2.2.4 PEGASUS GAME BOARD

The formidable Battlestar Pegasus has joined the struggle against the Cylon forces that relentlessly pursue the remaining humans. This game board features locations on Battlestar Pegasus, and it provides humans with valuable abilities during their travels.

A2.2.5 CYLON FLEET GAME BOARD

This game board features the “Basestar Bridge” location which grants Cylon players several ways to undermine humanity. Surrounding the basestar on the Cylon Fleet game board are Cylon space areas that correspond to the space areas surrounding Galactica. At the top of the board is a Pursuit track used to calculate how quickly the Cylon fleet catches up to humanity.

A2.2.6 NEW CAPRICA GAME BOARD

This board is only used when playing with the New Caprica Objective Card. This game board features locations on the surface of New Caprica that may be used by either humans or Cylons. Characters are moved to this board at the start of the New Caprica phase as the Cylons hold humanity prisoner.

Clarifications for specific New Caprica locations:

A2.2.6.1 “DETENTION”

The Action should read: Pass this Skill check to move to any **New Caprica** location.

A2.2.7 DEMETRIUS GAME BOARD

This board is only used when playing with the Earth Objective Card. The Demetrius game board features locations that allow players to go on vital scouting missions.

A2.2.8 REBEL BASESTAR GAME BOARD

This board is only used when playing with the Earth Objective Card. The Rebel Basestar features locations that provide human and Cylon players with powerful abilities.

A2.3 CARDS

All cards from the expansions are marked with the **Pegasus**, **Exodus** or **Daybreak** expansion icons on their front, to allow easy distinction from the base game of **Battlestar Galactica: the Board Game**.

A2.3.1 OBJECTIVE CARDS

These four cards list when the sleeper agent phase takes place (see rule 5.5 Sleeper Agent Phase) and how the human players win the game. Only one Objective Card is used in a game of Battlestar Galactica. Players agree before the game starts which card will be used.

If the **Kobol** Objective Card is selected, the end game is reached by jumping the fleet one more time after a distance of eight has been reached.

If the **New Caprica** Objective Card is selected the New Caprica phase comes into play as described on the card.

If the **Ionian Nebula** Objective Card is selected the Crossroads phase comes into play as described on the card.

If the **Earth** Objective Card is selected, the end game is reached by jumping the fleet one more time after a distance of ten has been reached.

A2.3.2 LOYALTY CARDS

There are 39 Loyalty Cards (including 18 "You Are Not A Cylon", 8 "You Are Not A Cylon - Personal Goal", 5 "You Are Not A Cylon - The Final Five", 1 "You Are the Mutineer" and 7 "You Are A Cylon" cards). Each non-Cylon Leader player is dealt one (or two) Loyalty Card(s) at the start of the game, and another one (or two) halfway through the game. These cards are kept secret and inform each player whether or not he is a Cylon (see rule 5.1 Cylon), the Mutineer (see rule 5.2 The Mutineer), one of the Final Five (see rule 5.4 The Final Five) and/or if he has Personal Goals (see rule 5.3 Personal Goals).

Clarifications for Loyalty Cards:

A2.3.2.1 "CAN DAMAGE GALACTICA"

For each of the five damage tokens drawn, the current player chooses whether to draw a Galactica or Pegasus damage token. The player that revealed the Loyalty Card then chooses which two of those five tokens to resolve.

A2.3.3 MUTINY CARDS

There are 22 Mutiny Cards. These cards represent actions human players can take to help humanity at the risk of being sent to the "Brig" (see rule 5.2.3 Drawing Mutiny Cards).

When a player discards a Mutiny Card, he places the card faceup in a discard pile next to the Mutiny deck. If the deck runs out of Mutiny Cards, players shuffle the discard pile to create a new Mutiny deck.

Clarifications for Mutiny Cards:

A2.3.3.1 "PEACEFUL RESISTANCE"

"Peaceful Resistance" can be played by a character in the "Brig" (even the Admiral), but he remains in the "Brig".

A2.3.3.2 "UNAUTHORIZED USAGE"

The text should read: Action: Launch 1 nuke at a **space area**. Then remove this card from the game and **discard all nuke tokens**.¹

A2.3.3.3 "VIOLENT PROTEST"

"Violent Protest" can be played while the President is in "Sickbay" or the "Brig". If the President is in the "Brig", he does not move.

A2.3.4 MOTIVE CARDS

There are 14 Motive Cards. These cards represent tasks a Cylon Leader must accomplish in order to win alongside the humans or Cylons (see rule 6.2.2 Motive Cards).

Clarifications for specific Motive Cards:

A2.3.4.1 "A JUSTIFIED RESPONSE"

The text should read: Reveal this card if the fleet marker is on a blue space of the Jump Preparation track and there are no raiders, heavy raiders or basestars on the **main game board**.²

A2.3.5 PRESIDENT TITLE CARD

This card grants the owner a special action, as well as the ability to make important decisions posed by certain Crisis Cards. One player starts the game with this card, but it often changes hands throughout the game.

A2.3.6 ADMIRAL TITLE CARD

This card grants the owner a special action, as well as the ability to make important decisions posed by certain Crisis

¹ This is a partly unofficial ruling for compatibility with the Cylon Fleet board.

² This is an unofficial ruling for compatibility with the Cylon Fleet board.

Cards. One player starts the game with this card, but it often changes hands throughout the game.

A2.3.7 CAG TITLE CARD

The CAG (Commander, Air Group) Title Card, like the President and Admiral Title Cards, grants the owner a special action, as well as the ability to make important decisions posed by certain Crisis Cards.

A2.3.8 SKILL CARDS

There are 201 Skill Cards (see rule 10. Skill Cards and Checks) divided into six types. These cards are drawn by players at the start of their turn. They are used to overcome crises, or may be played to provide special abilities. Each character has access to different skills and will therefore be able to help overcome different types of crises.

Each skill type specializes in different strategies:

- **Politics (yellow):** This skill represents a character's ability to control morale and help the fleet overcome crises. This is the most common skill type required by Crisis Cards. Some politics cards also provide the ability to allow a player to draw Skill Cards from outside his skill set.
- **Leadership (green):** This skill represents a character's ability to take charge of situations and command other individuals. This is the second-most common skill type required by Crisis Cards. Some leadership cards allow other players to move and grant them a bonus action.
- **Tactics (purple):** This skill type represents a character's ability to plan missions as well as to physically overcome obstacles. Tactics cards allow players to gain bonuses to die rolls as well as scout the galaxy for new destinations.
- **Piloting (red):** This skill represents a character's ability to fly vipers. Piloting cards allow players to reroll enemy attack rolls as well as gain additional attacks.
- **Engineering (blue):** This skill represents a character's strength in the mechanical and scientific fields. Some engineering cards allow players to repair vipers and locations aboard Galactica.
- **Treachery (brown):** Treachery is a Skill type representing nefarious and underhanded tactics. Unlike other Skill types, it is primarily used by Cylon players.

Each set of Skill cards (except Treachery) has five 0 cards, nine 1 cards, seven 2 cards, six 3 cards, four 4 cards, three 5 cards and a single 6 card. The average value is about 2.2.

The Treachery set has twelve 0 cards, eight 3 cards, three 4 cards and three 5 cards. The average value is about 2.0.

Whenever a player discards a Skill Card, it is placed in a discard pile faceup next to the appropriate Skill deck. When a deck runs out of Skill Cards, the discard pile is shuffled to create a new Skill deck.

The following describes errata and makes some clarifications relating to various Skill Cards:

A2.3.8.1 "BAIT"

Any time a player discards one or more Skill Cards, he is considered to have chosen the cards unless he was either

instructed to discard them randomly (as a result of Apollo's "Headstrong" ability, for example) or instructed to discard all of his Skill Cards (including as a result of Tigh's "Alcoholic" ability). Note that if a player is instructed to discard a specific number of Skill Cards, they are always considered to have been chosen by the player. Even in cases where the player only had that number of Skill Cards or fewer in his hand, the player would have to draw a Mutiny Card for discarding a "Dradis Contact" or "Bait" Card. If a player has already drawn a Mutiny Card during this turn as a result of discarding one of these Skill Cards, he does not draw another Mutiny Card.

A2.3.8.2 "DECLARE EMERGENCY"

A "Declare Emergency" Skill Card does not decrease any partial pass number of a skill check.

A2.3.8.3 "DRADIS CONTACT"

See rule A2.3.8.1 "Bait".

A2.3.8.4 "EXECUTIVE ORDER"

The "Executive Order" Skill Card should include the following text: Limit of 1 "Executive Order" card may be used per turn.

If an unrevealed Cylon is targeted by an "Executive Order" and reveals himself as his first action, he is unable to take his second action, since once he is revealed as a Cylon, he may no longer be targeted by an "Executive Order". The current player then continues his turn.

A2.3.8.5 "IRON WILL"

If the "Iron Will" Skill Card is played into a skill check that has had its difficulty reduced by either a "Jury Rigged" Skill Card or a "Declare Emergency" Skill Card, the total strength has to be within 4 of the modified difficulty. However, if the total strength is 0 or less, players still lose 1 morale.

The "Iron Will" Skill Card does not change whether or not a partial success result is resolved or the number required to resolve a partial success. Note that there are situations where humans might gain greater benefit from the total strength of a skill check being low enough to not resolve a partial success if the skill check includes an "Iron Will" Skill Card.

A2.3.8.6 "STATE OF EMERGENCY"

A "State of Emergency" Skill Card allows Cylon players to move or take an action. Unlike an "Executive Order" Skill Card, which a Cylon player may not benefit from, "State of Emergency" is not targeting a specific player.

If the current player plays the "State of Emergency" Skill Card, its action will be resolved completely, even if the current player is executed or revealed as a Cylon. This is different from an "Executive Order" Skill Card which, once played, is not resolved completely if its target reveals himself as a Cylon as the first action provided by the card. In this case, the player does not gain the second action provided by the card because, as a Cylon player, he may no longer be targeted by an "Executive Order".

A2.3.9 CRISIS CARDS

There are 141 Crisis Cards. These cards represent the different roadblocks and disasters the humans must overcome. Some of these cards require skill checks, while others represent events. These cards are the main way resources are lost.

50 % of the crisis negatively affect morale, 23% food, 16% population and 11% fuel.

48% of the crisis activate raiders, 21% heavy raiders, 18% basestars and 12% launch raiders.

65 % of the cards have a jump icon.

Whenever a player discards a Crisis Card, it is placed in a discard pile faceup. If the deck runs out (which is highly unlikely), the discard pile is shuffled to create a new deck.

Clarifications for specific Crisis Cards:

A2.3.9.1 "FOOD SHORTAGE"

This card causes the President to discard two, and the current player to discard three Skill Cards. If the President is the current player, then he must discard five cards.

A2.3.9.2 "LEGENDARY DISCOVERY"

The pass result should read: Place this card next to the **current** Objective card. It counts as 1 distance.³

A2.3.9.3 "STANDOFF WITH PEGASUS"

The pass result should read: The current player may move 1 character from the "Brig" to any other **Galactica** location.⁴

A2.3.9.4 "UNWELCOME FACES"

The first option should read: The Admiral **must** discard all of his skill cards and then choose a character to send to the "Brig."

A2.3.10 SUPER CRISIS CARDS

There are 11 Super Crisis Cards. These cards represent extremely dangerous crises, including some that force devastating decisions on the humans. When a Cylon player reveals himself, he receives one of these cards (see rule 6.1 Revealed Cylon Players).

Whenever a player discards a Super Crisis Card, it is placed in a discard pile faceup. When the deck runs out, the discard pile is shuffled to create a new deck.

Clarifications for specific Super Crisis Cards:

A2.3.10.1 "THE FARM"

On a fail result, human players can no longer use their miracle abilities. Cylon leaders can still use their miracle abilities when they are not Infiltrating. Miracle tokens can still be used for other effects, such as activating locations on the Rebel Basestar game board.

A2.3.11 NEW CAPRICA CRISIS CARDS

There are 30 New Caprica Crisis Cards. These cards are used only when playing with the New Caprica Objective. These Crisis Cards are used during the New Caprica phase at the end of the game.

Whenever a player discards a New Caprica Crisis Card, it is placed in a discard pile faceup.

When the deck runs out, the discard pile is shuffled to create a new deck.

Clarifications for specific New Caprica Crisis Cards:

A2.3.11.1 "RESISTANCE BOMBING"

Revealed Cylons may not ignore the execution effect on this Crisis Card.

A2.3.12 MISSION CARDS

The 8 Mission Cards are used when playing with the Search for Home option. They represent difficult missions the humans may pursue to find Earth and defeat their enemies once and for all.

If the Mission deck is depleted, shuffle the Mission Card's discard pile facedown to form a new Mission deck.

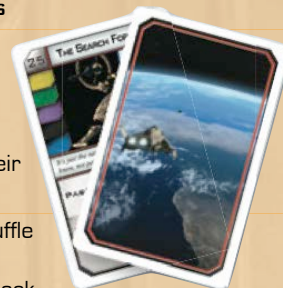

Clarifications for specific Mission Cards:

A2.3.12.1 "ATTACK ON THE COLONY"

The pass result should read: Remove all basestars from the **main game** board. Then, remove 1 basestar from the game.⁵

A2.3.12.2 "THE RED STRIPES"

The pass result should read: Remove all heavy raiders and centurions from the **main game** board. Then, remove 2 heavy raiders and 2 centurions from the game.⁶

³ This is an unofficial ruling to make the Crisis Card compatible with all Objective Cards.

⁴ This is an unofficial ruling for consistency.

⁵ This is an unofficial ruling for compatibility with the Cylon Fleet board.

⁶ This is an unofficial ruling for compatibility with the Cylon Fleet board.

A2.3.13 QUORUM CARDS

These 29 cards can be drawn by the President, and can augment the humans' resources, fend off threats from the Cylon forces, increase morale, help deal with Cylons, or provide special abilities for other players (see rule 4.4.1.1 Quorum Cards).

Five (17%) Quorum cards can be used to increase morale, four (14%) can increase food, one (3%) can increase population and one (3%) can increase fuel.

Whenever a player discards a Quorum Card, it is placed in a discard pile faceup. When the deck runs out, the discard pile is shuffled to create a new deck.

Clarifications for Quorum Cards:

A2.3.13.1 "CONSULT THE ORACLE"

The Loyalty or Motive deck cannot be chosen when playing "Consult the Oracle".

A2.3.13.2 "PROBATION"

The President chooses when the "Probation" Quorum Card is discarded to activate its ability.

A2.3.14 DESTINATION CARDS

These 33 cards are used when the fleet jumps, to determine which destination the fleet reaches (see rule 12. Jumping the Fleet).

About 31% have 1 distance, 47% 2 distance and 22% 3 distance. Each jump will add an average of 1.9 distance.

Each distance traveled consumes an average of 0.7 fuel. On average, each distance traveled also includes a possibility of gaining 0.2 fuel.

Clarifications for Destination Cards:

A2.3.14.1 "GAS CLOUD"

If drawing this Destination card brings the game to the New Caprica phase, the Admiral examines the New Caprica Crisis deck instead of the normal Crisis deck.

A2.3.14.2 "LION'S HEAD NEBULA"

The Jump Preparation track is advanced by 2 after the "Reset Jump Preparation Track" step even if the "Lion's Head Nebula" causes play to enter the New Caprica phase.

The Jump Preparation track is advanced by 2 after the "Reset Jump Preparation Track" step would have occurred even if the "Lion's Head Nebula" causes play to enter the Crossroads phase.

A2.3.15 ALLY CARDS

These 35 cards are used only when playing with the Ionian Nebula Objective. They represent various individuals who may help or hinder humanity in their quest for

survival. Each card corresponds to a matching Ally Token.

Once the Ally deck is depleted, no further Ally Cards may be drawn.

Clarifications for specific Ally Cards:

A2.3.15.1 HELENA GAIN ALLY CARD

The benevolent result should read: You may choose another character to be executed. **You may not choose a revealed Cylon.**

A2.3.15.2 ROMO LAMPKIN ALLY CARD

The benevolent result should read: Move out of the "Brig" to any **Galactica** location.⁷

A2.3.16 CROSSROADS CARDS

These 7 cards are used only when playing with the Ionian Nebula Objective. Each card represents an important decision that a character must make near the end of the game during the Crossroads phase.

A2.3.17 INFILTRATION REFERENCE CARD

This reference card is used by a Cylon Leader when he is Infiltrating the human fleet.

A2.4 PLASTIC MODELS

A2.4.1 VIPERS

These 6 ships are used by the humans to defend their fleet and to attack Cylon ships. Vipers are placed in the "Reserves," "Damaged Vipers," or space areas of the game board. Their limited quantities make them a precious commodity.

A2.4.2 VIPER MARK VIIIs

There are 4 Viper mark VIIIs. Viper mark VIIIs are more advanced models of the older mark IIs, like the ones aboard Galactica, but an update to their navigational software was sabotaged by the Cylons. By removing this update, these ships can be used again as powerful weapons.

A2.4.3 RAPTORS

These 4 ships are used by the humans to scout for new destinations, as well as to attempt to find more resources (such as fuel and food). These ships are never used in combat and remain in the "Reserves" until destroyed.

⁷ This is an unofficial ruling for consistency.

A2.4.4 ASSAULT RAPTORS

These 4 models represent a powerful ship type with FTL available to the humans.

A2.4.5 RAIDERS

These 20 Cylon ships are plentiful, and often attack vipers and civilian ships.

A2.4.6 HEAVY RAIDERS

These 4 ships are used by the Cylons to land boarding parties on Galactica. They never attack other ships; their sole purpose is to reach the hangar deck and release their deadly centurion boarding parties.

A2.4.7 BASESTARS

These 2 ships can attack Galactica or even launch other ships. When a basestar is damaged, place the basestar damage token adjacent to it on the game board.

A2.4.8 CENTURIONS

These 4 figures replace the centurion markers found in the base game. They are used to track progress on the Boarding Party track. Should any of these figures reach the end of the track, the humans lose the game.

A2.5 TOKENS AND MARKERS

A2.5.1 CURRENT PLAYER TOKEN

This token is used to help the players remember which player is currently taking his turn.

A2.5.2 CHARACTER TOKENS AND STANDS

Each of the 33 characters is represented by a token that is slotted into a plastic stand.

A2.5.3 PILOTING TOKENS

Each of the 10 characters who has the ability to pilot has a corresponding piloting token. A character's piloting token is placed under a viper when that character is piloting it.

A2.5.4 MIRACLE TOKENS

There are 10 Miracle tokens. Players must spend these tokens to activate their character's miracle ability.

A2.5.5 NUKE TOKENS

There are 3 Nuke tokens. The Admiral starts the game with two nuke tokens. These powerful weapons can destroy basestars, but are finite and should not be wasted. The third token is only used if the Admiral gains a third nuke (as a result of the "Build Nuke" engineering card, for example).

A2.5.6 FLEET MARKER

This marker is used to track progress on the Jump Preparation track. When this token reaches the end of the track, the fleet jumps to its next destination (see rule 12. Jumping the Fleet).

A2.5.7 CYLON PURSUIT MARKER

This marker is used to track progress on the Pursuit track. When this marker reaches the end of the track, Cylon ships on the Cylon Fleet game board jump to the corresponding areas surrounding Galactica (see rule 11.4.3 Advancing the Cylon Pursuit Marker).

A2.5.8 CIVILIAN SHIP TOKENS

These 12 tokens represent the civilian ships that the humans must protect during Cylon attacks. These tokens have a common back, and the face lists the resources that are lost if that ship is destroyed (6 have one population, 2 have two population, 1 has a population and a fuel, 1 has a population and a morale and 2 have no losses).

A2.5.9 DAMAGE TOKENS

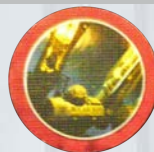

These 16 tokens represent the vital systems that can be damaged when Galactica, Pegasus or a basestar is hit by an enemy attack. Keep the Pegasus damage tokens separate from the Galactica damage tokens.

Galactica Locations

FTL Control

Weapons Control

Command

Admiral's Quarters

Hangar Deck

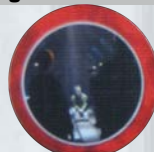

Armory

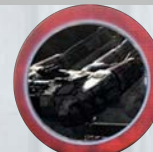

Pegasus Locations

Pegasus CIC

Airlock

Main Batteries

Engine Room

A2.5.10 ALTERNATE BASESTAR DAMAGE TOKENS

These 6 tokens are used only when playing with the Ionian Nebula Objective. They represent damage

to the vital systems of a basestar or other detrimental effects suffered by Cylons when a basestar is hit by an attack. If used, these tokens replace the basestar damage tokens.

A2.5.11 OCCUPATION FORCES TOKENS

These 4 tokens are used only when playing with the New Caprica Objective and only on the New Caprica game board. They represent the Cylon forces that patrol New Caprica.

A2.5.12 ALLY TOKENS

These 35 tokens are used only when playing with the Ionian Nebula Objective. They are used to indicate the location of individuals who players may encounter. Players may find these allies to be either helpful or harmful. Each token corresponds to a matching Ally Card.

A2.5.13 TRAUMA TOKENS

These 38 tokens are used only when playing with the Ionian Nebula Objective. They represent the lingering effects a character suffers as a result of the many challenging experiences he has undergone. During the Crossroads phase, the number and type of trauma tokens each character has determines which characters are deemed worthy to continue fighting in the struggle between human and Cylon.

A2.5.14 BASESTAR ALLEGIANCE MARKER

This double-sided marker is used only when playing with the Earth Objective and indicates whether human or Cylon players are able to move to locations on the Rebel Basestar game board.

A2.6 OTHER COMPONENTS

A2.6.1 EIGHT-SIDED DIE

This die is used primarily to resolve combat, but may also be used by certain Crisis Cards. After all modifications to a die roll have been calculated, any number greater than an "8" is treated as an "8" and any number less than a "1" is treated as a "1".

A2.6.2 COMBINED BSG QUICK REFERENCE

To facilitate the play of the game under these rules there is also a set of Quick Reference sheets available as pdfs. These Reference sheets are designed to cover most game situations and should be used to speed up play. The version number on the CBSGQR corresponds to the version number of the rules documents.

A2.6.3 GAME MATS

Battlestar Galactica: The Board Game uses a large amount of cards and game components. In order to keep these sorted and readily available during play it can be helpful to have enhanced or additional game mats.

There are various unofficial game mats available (as pdfs or as finished products) that either extend the official game boards or combine them to a useful whole.

A2.7 REMOVED COMPONENTS

Since the unofficial Combined Rulebook is intended for games using all expansions at the same time, some of the components from earlier expansions have to be replaced or removed.

It is suggested that the removed components are kept for use in games where fewer expansions are to be used.

The following components should be removed from the game when playing under these rules:

A2.7.1 REMOVED OVERLAYS

Remove the Cylon Location Overlay from the Pegasus expansion.

A2.7.2 REMOVED CARDS

Remove the "You Are a Sympathizer" and the "You Are a Sympathetic Cylon" Loyalty Cards.

The 12 Agenda Cards from the Pegasus expansion are not used when playing with these rules.

Remove the President Title Card that came in the base game.

Remove the Admiral Title Cards that came in the base game and the Pegasus expansion.

The seven replacement "Investigative Committee" Politics Skill Cards are used to replace the corresponding cards in the Politics deck.

The Treachery Cards from the Pegasus expansion should not be used.

Remove all 19 Cylon attack cards from the Crisis deck.

Remove both Cylon attack cards from the Super Crisis deck.

Remove the "Mining Asteroid" Destination Card from the Destination deck.

Do not use the Infiltration Reference Card from the Pegasus expansion.

A2.7.3 REMOVED PLASTIC MODELS

Remove two of the vipers.

A2.7.4 REMOVED TOKENS AND MARKERS

The 2 Basestar Tokens are removed and replaced by the plastic basestars.

The 4 Centurion Markers are replaced by the plastic centurions.

The Scar token is not used in this version of the game.

A3. SET UP

Before setting up a game of Battlestar Galactica, players should determine if any variant rules will be in use. These may modify the set up.

A3.1 SET UP SEQUENCE

Follow these steps to prepare to play **Battlestar Galactica: The Board Game**.⁸

1. **Select Objective:** See rule [A3.2 Select Objective](#)
2. **Place Game Boards:** See rule [A3.3 Place Game Boards](#)
3. **Set Up Ships and Tokens:** See rule [A3.4 Set Up Ships and Tokens](#)
4. **Set Up Cards:** See rule [A3.5 Set Up Cards](#)
5. **Objective Set Up:** See rule [A3.6 Objective Set Up](#)
6. **Character Selection:** See rule [A3.7 Character Selection](#)
7. **Loyalty Deck:** See rule [A3.8 Loyalty Deck](#)
8. **Receive Skills:** See rule [A3.9 Receive Skills](#)
9. **Trauma and Allies:** See rule [A3.10 Trauma and Allies](#)

A3.2 SELECT OBJECTIVE

Select (or randomly draw) which Objective Card to use; Kobol, New Caprica, The Ionian Nebula or Earth. Remove the other Objective Cards from the game.

A3.3 PLACE GAME BOARDS

Place the main game board at the center of the table. Set the food and fuel dials to "8," the morale dial to "10," and the population dial to "12."

A3.3.1 PLACE COLONIAL ONE AND CYLON LOCATION OVERLAYS

Place the Colonial One overlay on top of the Colonial One locations and the Cylon locations overlay on top of the Cylon locations on the base game's game board. Make sure the sides that say "Colonial One Destroyed" and "Hub Destroyed" are both facedown.

A3.3.2 PLACE PEGASUS GAME BOARD

Place the Pegasus game board to the right of the main game board, lining up the bottom of the two boards.

A3.3.3 PLACE CYLON FLEET BOARD

Place the Cylon Fleet board to the left of the core game board.

A3.4 SET UP SHIPS AND TOKENS

Place ship models as follows:

- Four basic vipers in the "Viper and Raptor Reserves".
- Four raptors in the "Viper and Raptor Reserves".
- One assault raptor in the "Viper and Raptor Reserves".
- Four viper mark VIIIs in the "Damaged Vipers" box.
- Place two basic vipers below Galactica and two civilian ships behind Galactica.
- Place one basestar and three raiders in front of Galactica.

Place the fleet token on the start space of the Jump Preparation track.

Place the Cylon pursuit marker on the "Start" space of the Pursuit track on the Cylon Fleet game board.

Last, place all other tokens (facedown) and plastic ships adjacent to the game board.

A3.5 SET UP CARDS

Shuffle the Quorum deck, Crisis deck, Super Crisis deck, Mutiny deck and Destination deck. Then separate the Skill Cards into six decks by type, as shown on their faces. Shuffle each deck separately. Lastly, place the selected Objective Card face up next to the Destination deck.

A3.5.1 CREATE DESTINY DECK

Deal two Skill Cards of each skill type facedown onto the "Destiny deck" space on the game board and shuffle them thoroughly.

⁸ This set up sequence is slightly changed from the official version in order to speed up play.

GAME BOARD BREAKDOWN

1. **Destiny Deck Location:** Two cards of each Skill Card type are placed here to form the Destiny Deck. Two cards from this deck are added to every skill check.

2. **Damaged Viper Box:** When a viper is damaged, it is placed here.

3. **Viper and Raptor Reserves:** All vipers, raptors and assault raptors that have not been launched, damaged, or destroyed are placed here. This space is referred to as simply the "Reserves."

4. **Resource Dials:** These dials keep track of the fleet's dwindling resources.

5. **Colonial One Locations:** These locations may be moved to and activated by human players. If Colonial One is destroyed, flip this overlay.

6. **Galactica Locations:** These locations may be moved to and activated by the human players.

7. **Pegasus Locations:** These locations may be moved to and activated by the human players. If Pegasus is destroyed, remove this board from play.

8. **Hazardous Locations:** Some of these locations have ongoing negative effects. Players may never voluntarily move to these locations.

9. **Cylon Locations:** When a Cylon player is revealed, his character token is moved to, and then among, these locations. Other players may never move to or activate these locations. If the hub is destroyed flip the Cylon locations overlay on the main game board.

10. **Jump Preparation Track:** The fleet marker is placed on this track, and marks how close the fleet is to jumping.

11. **Boarding Party Track:** Centurion models are placed on this track. If a centurion model reaches the end of this track, then the humans lose the game.

12. **Space Areas:** Basestars, civilian, and plastic ships are placed in these six areas, each separated by thick blue lines. The concentric circles in space areas have no game effect.

13. **Viper Launch Icons:** These icons represent the space areas in which vipers may be launched. There are no launch icons on the other side of Galactica because, the starboard hangar deck was a museum and later housed refugees.

14. **Cylon Fleet Board:** Cylon ships hunting for the human fleet are placed here. This board also has a Cylon location which can be used in the same manner as the Cylon locations on the main game board.

15. **Pursuit Track:** This track indicates when the Cylons catch up to the human fleet.

16. **Skill Deck Regions:** These colored regions mark where the appropriate Skill decks can be placed.

17. **New Caprica Board:** This board is only used during the New Caprica phase and represents the surface of New Caprica.

18. **Demetrius Board:** This board is only used if the Earth Objective Card is in play.

19. **Rebel Basestar Board:** This board is only put into play when the "Cylon Civil War" Mission Card so instructs. These locations may be moved to and activated by the human or Cylon players depending on which side of the Allegiance marker is up.

A3.6 OBJECTIVE SET UP

A3.6.1 NEW CAPRICA

If New Caprica was selected as the Objective Card set up the following:

- **New Caprica Game board:** Set the New Caprica game board to the right of the main game board.
- **Occupation Forces Tokens:** Set the Occupation Forces Tokens aside. They will not be needed until the New Caprica phase.
- **New Caprica Crisis Cards:** Shuffle the New Caprica Crisis Cards and set them aside. They will not be needed until the New Caprica phase.

If not playing with the New Caprica Objective Card, return the New Caprica game board, the New Caprica Crisis Cards and the Occupation Forces Tokens to the box.

A3.6.2 IONIAN NEBULA

If the Ionian Nebula was selected as the Objective Card set up the following:

- **Alternate Basestar Damage Tokens:** Return the core game's basestar damage tokens to the box. Place the basestar damage tokens provided in the Exodus expansion facedown adjacent to the game board.
- **Trauma Tokens:** Place the trauma tokens face down next to the game board and randomize them. This is the pool of trauma tokens. Draw two random tokens from this pool and, without looking at them, place one facedown on the "Sickbay" and the other facedown on the "Brig."
- **Crossroads Cards:** Shuffle the Crossroads Cards and set them aside. They will not be used until the Crossroads phase.

If not playing with the Ionian Nebula Objective Card, return the trauma tokens, ally tokens, alternate basestar damage tokens, Ally Cards, Crossroads Cards and the Ionian Nebula Objective Card to the box.

A3.6.3 EARTH

If Earth was selected as the Objective Card set up the following:

- **Demetrius Game Board:** Place the Demetrius game board to the right of the main game board.
- **Rebel Basestar Game Board and Basestar Allegiance Marker:** Leave room for the Rebel Basestar game board to the left of the main game board, but do not place the Rebel Basestar game board or Basestar Allegiance marker in play until instructed to do so by the "Cylon Civil War" Mission Card.
- **Mission Cards:** Shuffle the Mission deck and place it next to the Demetrius game board.

If not playing with the Earth Objective Card, return the Demetrius Game Board, the Rebel Basestar Game Board, the Basestar Allegiance Marker, the Mission Cards and the Earth Objective Card to the box.

A3.7 CHARACTER SELECTION

A3.7.1 DETERMINE FIRST PLAYER

Randomly choose a player to be the first player, and give him the current player token. This player will choose his character first and take the first turn of the game.

A3.7.2 CHOOSE AND PLACE CHARACTERS

Starting with the first player and proceeding clockwise, each player chooses a character of the character type(s) that is most plentiful (political leader, military leader or pilot). This restriction does not apply to support characters or a Cylon Leader, who may be chosen at any time.

After choosing a character, the player receives the corresponding character sheet and stand-up character token, as well as a piloting token if applicable. Give one miracle token to each player. Each player places his token on his character sheet. He then places his character token on the location specified on his character sheet.

A3.7.2.1 ALTERNATE CHARACTER VERSIONS

There are alternate versions of Lee Adama, Tom Zarek, Karl "Helo" Agathon, and Gaius Baltar. If a player chooses the original or alternate version of one of these characters, other players cannot choose the remaining version of that character. However, players must continue to count the remaining version when determining which character type (political leader, military leader, or pilot) is the most plentiful.

A3.7.2.2 CYLON LEADER

Only one Cylon Leader may be chosen in any game. To play a seven player game, one player must play a Cylon Leader, but Cylon Leaders may not be used in a three player game. As long as these restrictions are followed, any player may choose to play as a Cylon Leader. If more than one player wants to play as a Cylon Leader, priority goes to the player who chooses his character first.

A3.7.3 DISTRIBUTE TITLE CARDS

The President title is given to the character highest in its order of succession. The President shuffles the Quorum deck and draws one Quorum Card.

The Admiral title is given to the character highest in its order of succession. The Admiral is then given two nuke tokens. Place the third nuke token adjacent to the game board. The humans start with only two nuke tokens, but a third one could become available during the course of the game.

Give the CAG Title Card to the character highest in its order of succession.

A3.8 LOYALTY DECK

A3.8.1 ORGANIZE LOYALTY CARDS

Remove the "You Are the Mutineer" Card from the Loyalty deck and place it near the game board. Then, separate the remaining cards into a "You Are Not a Cylon" (including the Personal Goal and Final Five Loyalty Cards) pile and a "You Are a Cylon" pile. Shuffle each pile and place the decks facedown near the game board.

A3.8.2 CREATE LOYALTY DECK

Deal the appropriate number of cards from the "You Are a Cylon" deck and the "You Are Not a Cylon" deck into the Loyalty deck as listed below.

A3.8.3 ADJUST LOYALTY DECK

Add one extra card from the "You Are Not a Cylon" deck if a player has selected the character "Gaius Baltar (Political Leader)". Also, add one extra card from the "You Are Not a

Cylon" deck if a player has selected the character "Sharon 'Boomer' Valerii".

A3.8.4 PLACE DECKS

Place the remaining Loyalty deck and the remaining "You Are Not a Cylon" deck next to the game board. Be sure to place

them in such a way as to not confuse the two decks. Return the remaining cards in the "You Are a Cylon" deck to the box without looking at them.

LOYALTY DECK COMPOSITION				
# Non-Cylon Leader Players	# "You Are a Cylon" Cards	# "You Are Not a Cylon" Cards	"You Are the Mutineer" Card	Total # Cards
3	1 	6 	0	7
4	1 	8 	1 	10
5	2 	9 	0	11
6	2 	11 	1 	14

A3.8.5 DISTRIBUTE LOYALTY CARDS

Shuffle the Loyalty deck thoroughly and then deal one Loyalty Card facedown to each player (Note: If a player has selected the character "Gaius Baltar [Political Leader]", he receives a second Loyalty Card at the start of the game). Do not deal a Loyalty Card to a player who chose a Cylon Leader.

A3.8.6 DISTRIBUTE MOTIVE CARDS

If a player chose a Cylon Leader character, deal two Motive Cards to that player (see rule 6.2.2 Motive Cards). Cylon Leaders are not available in a three player game.

A3.8.7 READ LOYALTY AND MOTIVE CARDS

Allow 30 seconds for all players to read and understand their Loyalty and Motive Card(s). Note that all players have to read their card for the specified time, so as to not give away who has cards with more or less complex text.

A3.9 RECEIVE SKILLS

Each player, except the starting player and Cylon Leaders, draws a total of three Skill Cards from among any of the cards he can draw during his Receive Skills step (see rule 8.2 Receive Skills Step). The starting player does not receive Skill Cards now, but will draw Skill Cards at the start of his turn. A Cylon Leader draws two Skill Cards (except Sharon "Athena" Agathon who starts the game Infiltrating and draws three Skill Cards).

A3.10 TRAUMA AND ALLIES

If the Ionian Nebula was selected as the Objective Card set up the following:

A3.10.1 PLAYER TRAUMA

Each player draws three random tokens from the pool of trauma tokens, looks at them without revealing them, and places them near his character sheet. If any of these trauma tokens has the disaster symbol on it, the player reveals it, sets it aside, and draws a new trauma token. The player then returns any trauma tokens with a disaster symbol facedown to the pool and randomizes them.

A3.10.2 ALLY CARDS

Shuffle the Ally Cards and place them next to the main game board. Draw the top three cards from the Ally deck and place each one face up adjacent to the Ally deck. Note: If an Ally Card is drawn that represents a character who has been chosen by a player, return that Ally Card to the box and keep drawing Ally Cards until one is drawn that represents a character not being used by a player.

A3.10.3 ALLY TRAUMA

For each of the three Ally Cards, draw one trauma token from the pool of trauma tokens and, without looking at it, place the trauma token facedown on the Ally Card.

A3.10.4 ALLY TOKENS

Finally, for each of the three Ally Cards, place the matching ally token in the location listed on the card under the image.

A4. VARIANTS

A4.1 CYLON ATTACK CARDS

Although the Combined Rulebook has been written with the assumption that all expansions are in play, some players want to play without the Cylon Fleet Board.

These are the adjustments you will have to make in order to replace the Cylon Fleet Board with the Cylon Attack Cards:

A4.1.1 SET UP

A4.1.1.1 CRISIS DECK

Remove the "CAG Chooses" Crisis and Super Crisis Cards and add the Cylon Attack Cards to these decks (19 to the Crisis Deck and 2 to the Super Crisis Deck).

Optionally you may also want to remove 21 random Crisis Cards before adding the Cylon Attack Cards in order to preserve the ratio of Cylon Attack Cards from the Base Game.

A4.1.1.2 CAG AND ADMIRAL TITLE CARDS

Remove the CAG Title Card and the alternate Admiral Title Card from the Exodus expansion. Use the Admiral Title card from the Pegasus expansion instead.

A4.1.1.3 SHIPS

Remove the four viper mark VIIs and four Cylon raiders, but add two standard vipers. The total number of vipers used should thus be eight and raiders sixteen.

A4.1.1.4 CYLON FLEET GAME BOARD

Remove the Cylon Fleet game board and the Cylon pursuit marker.

A4.1.2 RULES CHANGES

The following rules are changed when not using the Cylon Fleet Board:

A4.1.2.1 ESCORTING CIVILIAN SHIPS

Civilian ships can no longer be escorted off the main game board.

A4.1.2.2 JUMPING THE FLEET

When the fleet jumps all civilian ships are now removed from the main game board.

A4.1.2.3 NUKES

Nukes are no longer aimed at a space area, but rather at a basestar. Add the following to the attack table basestar row:

With Nuke: 1-2 = Damaged Twice, 3-6 = Destroyed, 7-8 = Destroyed and destroy 3 raiders in the same area.

A4.1.2.4 PLACING CYLON SHIPS

Ignore all rules which instruct you to place Cylon ships on the Cylon Fleet Board.

A4.1.2.5 VIPERS MARK VII

Ignore all rules concerning vipers mark VII.

A4.2 CHARACTER SELECTION

Experienced players may wish to ignore rule [A3.7.2 Choose and Place Characters](#) and use their own judgement when selecting characters.

A4.3 RESEARCH LAB VARIANT

The unofficial Research Lab variant (included on the popular game mat created by "rawFrenzy") changes the text of the Research Lab location to "Action: Draw 1 engineering or tactics Skill Card. OR Pass this skill check to gain a Miracle Token." Note that a character can only gain a Miracle Token if he doesn't already have one (see rule 4.3.1).

A4.4 PEGASUS VARIANT

In this unofficial variant the Pegasus game board is not included in the set up of the game. Do not include Helena Cain, Louis Hoshi or Karl "Helo" Agathon (Pilot) as selectable characters either (they still count for determining which character type (political leader, military leader, or pilot) is the most plentiful).

Immediately after the first jump, the following rules apply for the arrival of Pegasus:

A4.4.1 THE PEGASUS

Add the Pegasus board to the game.

A4.4.2 NEW CHARACTERS

Helena Cain, Louis Hoshi and Karl "Helo" Agathon (Pilot) are now available as replacement characters (see rule 7.1 Execution Procedure).

A4.4.2.1 ALTERNATE KARL "HELO" AGATHON

A human player playing Karl "Helo" Agathon (Military Leader), may swap him for Karl "Helo" Agathon (Pilot) at the end of any of his turns. If he does, Karl "Helo" Agathon (Pilot) takes any cards and miracle tokens Karl "Helo"

Agathon (Military Leader) may have. The new character token replaces the old in the same location. Karl "Helo" Agathon (Military Leader) is then removed from the game.

A4.4.3 SACRIFICING PEGASUS

If there are basestars on the main game board and the Pegasus is in play, the Admiral may, as an action, choose to destroy the Pegasus (see rule 11.7.2.4 Destruction of Pegasus) to also destroy up to two basestars on the main game board.

A4.5 ALLIES FOR ALL SEASONS

Devised by Alexander DeSouza ("bobby mcferrin" on BoardGameGeek.com) and edited by Mattias Elfström this unofficial variant provides an opportunity to use the Allies in games where the Ionian Nebula is not the Objective.

This variant incorporates Allies and their effects (and thus Trauma tokens as well) into games with Exodus, but omits the Crossroads as well as the Battle of the Ionian Nebula. The objective of this variant is to allow for the effects of Allies in the game, with players retaining some role in the nature of the effect to be resolved, while preserving secrecy regarding players' Loyalty. Sans player elimination and the Battle of the Ionian Nebula, this variant also allows for Allies to be integrated seamlessly with both the Pegasus and Daybreak expansions.

This variant draws on the ideas originally posted on the Fantasy Flight Games communities.

A4.5.1 SET UP

Disaster Trauma tokens are not used in this variant, they should be removed from the pool of available Trauma tokens when playing this variant to eliminate the possibility of random executions.

Set up related to the Allies' cards themselves is the same as outlined in [A3.10.2 Ally Cards](#).

A4.5.1.1 THE MOOD POOL

Place all of the available Trauma tokens in an opaque container and set this beside the game board. At the start of the game, each player draws four tokens at random, and from these selects one to place facedown beside the game board. These facedown tokens are the Mood Pool and represent the overall atmosphere among the crew of the Galactica.

The Mood Pool will always contain a number of Trauma tokens equal to the number of players. Players can influence the outcome of Ally interactions, but secrecy is preserved regarding the number and type of each of the Trauma tokens in the Mood Pool. Selfish human players that horde Benevolent tokens will see the Mood Pool become Antagonistic, and vice versa for selfish Cylon players.

A4.5.2 INTERACTING WITH ALLIES

A4.5.2.1 ENCOUNTERING ALLIES

At the end of a player's Movement phase, when they occupy the same location as an Ally, resolve that Ally's card by selecting a Trauma token from the Mood Pool. After the card is resolved, the drawn token is added to the player's hand of Trauma tokens and she then selects one of her own Trauma tokens (including the one just gained) to place

back into the Mood Pool facedown. Then, reshuffle the tokens in the Mood Pool.

A4.5.2.2 DRAWING AND DISCARDING TRAUMA

When an Ally card instructs a player to draw or discard Trauma tokens, they do so into the container of unused Trauma; never from, or into, the Mood Pool. Should a player be required to draw Trauma tokens when none are available, she draws only as many as are possible, even if this number is zero.

A4.5.2.3 THE BRIG, SICKBAY AND THE RESURRECTION SHIP

A player that is sent to "Sickbay", the "Brig", or a Cylon player who is revealed and sent to the "Resurrection Ship" because of an execution, draws one token from the container of unused Trauma immediately upon being sent to that location. Additional Trauma tokens are not gained for time spent in these locations, but a player may receive multiple Trauma tokens in this fashion if they are sent to one of these locations on multiple occasions.

A4.5.2.4 DAMAGED ALLY LOCATIONS

Ally cards are discarded in the usual fashion when a location on Galactica is damaged in which an Ally had been present. If there are any revealed Cylon players when this occurs, the revealed Cylon player with the most Trauma tokens secretly examines all of the tokens in the Mood Pool and then exchanges one of these with one from her personal hand of Trauma.

A4.5.3 DISTANCE 7/8/10

Once the humans have travelled the distance required by the Objective Card (7, 8 or 10), instead of the Crossroads phase and the Battle of the Ionian Nebula, all players immediately reveal their hand of Trauma. Players total their Trauma score, with each Benevolent token counting as +1 or -1, for human and Cylon players, respectively; each Antagonistic token counts conversely as either -1 or +1. Non-revealed Cylon players count their score as human players would. Each player then does the following based on their final Trauma score:

-3 or less: The character is executed (see rule 7. Execution). A revealed Cylon player that is executed retains any Super Crisis Cards they have previously drawn.

-1/-2: The player discards 2/4 Skill Cards, respectively.

0: Nothing happens.

+1/+2: The player draws 2/4 Skill Cards, respectively; these may come from outside their character's skill set.

+3 or more: The player may manipulate one resource dial, up or down, by one.

After this procedure, remove all Trauma tokens and Allies from the game, they will not be used during the final part of the game.

A4.6 FULLY COOPERATIVE GAME

Much of the excitement of **Battlestar Galactica: The Board Game** arises from the suspicion and paranoia that it promotes. Even though these rules allow playing with no Cylon players, the game does lose one of its core features and a lot of the exciting player interaction.

In this official variant, all players are working together without fear of traitors in their midst. The loyalty deck is not used in this variant.

A4.6.1 SET UP

At the start of the game, remove the following cards from the Quorum deck: "Encourage Mutiny", "Release Cylon Mugshots", "Assign Arbitrator" and "Arrest Order" (x2).

The humans start the game with the following resources: 8 fuel, 7 food, 9 morale, 10 population.

The Admiral starts with only **one** nuke token (instead of two).

A4.6.2 RECEIVING SKILLS

Each player draws one less skill card during his "Receive Skills Step." Each turn, the player may choose the card from his skill set that he doesn't draw.

A4.6.3 THE BRIG

While a character is in the "Brig", he still draws a Crisis card on his turn.

A4.7 TWO PLAYER GAME

This official variant allows two players to play the game.

A4.7.1 SET UP

In a two player game, each player chooses a single character. During set up, Loyalty cards are not dealt out.

Note that the Sharon "Boomer" Valerii character may not be chosen when playing this variant.

A4.7.2 SLEEPER AGENT PHASE

At the start of the Sleeper Agent phase, create a loyalty deck consisting of 1x "You Are a Cylon" and 2x "You Are Not a Cylon" cards. Then add a number of "You Are Not a Cylon" cards to the Loyalty deck equal to the number of resources that are half or lower [red]. Then shuffle this deck, and deal 1 Loyalty card to each player.

A4.8 ONE PLAYER GAME

This official variant allows for a solo game.

At its heart, **Battlestar Galactica: The Board Game**, is a game of survival and mistrust that works best with at least three players, including at least one Cylon. Although the feeling of mistrust is lost in a solo game, a player may choose to focus on the struggle for survival.

A4.8.1 SET UP

In a one player game, the player chooses one character to control at the start of the game. This character is known as his main character. The player may not choose Laura Roslin or Sharon "Boomer" Valerii as his main character. He then chooses one character to "assist" him.

The Loyalty deck is set up as follows: 6x "You Are Not a Cylon" and 1x "You Are a Cylon." After creating the deck, deal three Loyalty cards facedown to the assist character.

The main character receives both the Admiral and President titles. He starts with only **one** nuke token (instead of two).

A4.8.2 ASSIST CHARACTER

The assist character is not placed on the board. He can not draw cards, move, take actions, or become President or Admiral.

The player may use the assist character's once per game ability as if it were on his main character's sheet.

A4.8.3 NEGATIVE ABILITIES

All character negative abilities (the bottom ability of the character sheets) are ignored.

A4.8.4 RECEIVING SKILLS

During the Receive Skills step, the player may draw a maximum of five skill cards, one of which may come from the assist character's skill set.

A4.8.5 REVEALING LOYALTY CARDS

At the end of each Activate Cylon Ships step, one of the assist player's loyalty cards might be revealed. If the Cylon Heavy Raiders were activated this step, reveal the top card of the assist character's loyalty deck.

If it is a "You Are Not a Cylon" card, it is ignored. If it is a "You Are a Cylon" card, all text on the card is immediately resolved. The assist character is removed from the board, and the player may no longer draw from the assist character's skill set, or use his once per game ability.

All "You Are a Cylon" loyalty cards targeting a character always affect the main character. Also, the "Can Damage Galactica" loyalty card is resolved as "Draw and resolve two Galactica damage tokens".

Whenever the assist character receives more Loyalty cards, or after the player looks at any of his unrevealed Loyalty cards, shuffle the assist player's unrevealed Loyalty cards.

A4.8.6 SLEEPER AGENT PHASE

At the start of the Sleeper Agent phase, add a number of "You Are Not a Cylon" cards to the Loyalty deck equal to the number of resources that are half or lower [red]. Then deal four cards from this deck to the assist character (and then shuffle his cards).

A4.8.7 THE BRIG

While the main character is in the Brig, the player still draws a Crisis card on his turn, may not move, and may play a maximum of three skill cards into each Skill check.

The assist character may not be sent to the brig.

A4.9 ADJUSTING DIFFICULTY

Some play groups may find that it is too easy for the human or Cylon players to win the game. A group may decide before the start of the game to make the game easier for the humans or Cylons.

To make the game easier for the human players, start the game with 2 more of each resource (10 food, 10 fuel, 12 morale, and 14 population).

To make the game easier for the Cylons, start the game with 2 less of each resource.

A5. BSG CAMPAIGN

Devised by Chris Malme, updated by Mattias Elfström and added to through various discussions on the BGG forums (<http://boardgamegeek.com>) this unofficial variant provides rules for playing a massive Battlestar Galactica campaign using all four Objective cards from the base game and the Pegasus, Exodus and Daybreak expansions. No claim is made as to the balance of this campaign.

The aim for the humans will be to cover 13 distance and reach Earth.

Note that this campaign will take a long time to finish.

A5.1 SET UP

The game is set up as normal with the following modifications:

A5.1.1 GAME BOARDS

Set up the game without the Pegasus, New Caprica, Demetrius and the Rebel Basestar boards, but keep them close to hand as they may be added later.

A5.1.2 VIPERS

Add two basic vipers to the reserves (the game starts with six basic vipers in the reserves instead of four).

A5.1.3 OBJECTIVE CARDS

Create a stack of Objective cards with Kobol on top followed by New Caprica, the Ionian Nebula and Earth. All text on the Objective cards is ignored in favor of the information below.

A5.1.4 CRISIS DECK

Divide the Crisis Deck into four piles depending on which expansion the cards belong to. Only the Base Game Crisis Cards are used at the start of the campaign.

A5.1.5 CHARACTERS

The following characters cannot be selected as starting characters. Unselectable characters are nevertheless included when determining which type of character is most plentiful:

- Helena Cain
- Louis Hoshi
- Lee Adama (Political Leader)
- Karl "Helo" Agathon (Pilot)
- Gaius Baltar (Support)
- Tom Zarek (Military Leader)

A5.1.6 ALLIES AND TRAUMA

Allies and Trauma are set up as if the Ionian Nebula is in play.

A5.1.7 ALTERNATE BASESTAR DAMAGE TOKENS

The Alternate Basestar Damage Tokens are in play.

A5.2 RULES CHANGES

A5.2.1 THE SLEEPER AGENT PHASE

The Sleeper Agent phase is no longer carried out at distance four, but rather after the New Caprica phase as described below.

A5.2.2 HANDING OFF LOYALTY CARDS

Revealed Cylons will now hand off Loyalty Cards until Galactica has reached 8 distance (rather than the standard 6).

A5.2.3 REVEALING PERSONAL GOALS

If a player reveals a Personal Goal he now gets a new Loyalty Card until Galactica has travelled 8 distance (rather than the standard 6).

A5.2.4 ALLY CARDS

The Ally card "Gaius Baltar" should now refer to 9 or less distance (rather than the 7 indicated on the card).

A5.2.5 MOTIVE CARDS

The Motive card "No Unnecessary Force" can now be played if 7 or more distance has been traveled (rather than the 5 indicated on the card). The Motive card "Savor their Demise" should now refer to 9 or more distance (rather than the 7 indicated on the card).

A5.2.6 SACRIFICING PEGASUS

If there are basestars on the main game board and the Pegasus is in play, the Admiral may, as an action, choose to destroy the Pegasus (see rule 11.7.2.4 Destruction of Pegasus) to also destroy up to two basestars on the main game board.

A5.2.7 HELENA CAIN BLIND JUMP

Helena Cain can now use her Blind Jump if the distance is 8 or less.

A5.2.8 ALTERNATE CHARACTERS

As the alternate versions of characters become available, a human player may swap an original version character for the same alternate version character. This may be done at the end of any turn of the player of the original character. The alternate character keeps any cards and miracle tokens the original may have. The new character token replaces the old in the same location. The original character is then removed from the game.

A5.3 REACHING KOBOL

The Galactica will have reached Kobol at distance 3.

A5.3.1 AFTER KOBOL

Immediately after the player turn on which Kobol was reached the following applies:

A5.3.1.1 NEW CHARACTERS

The following characters become available as replacement characters:

- Helena Cain
- Louis Hoshi
- Karl "Helo" Agathon (Pilot)

A5.3.1.2 THE PEGASUS

The Pegasus board is now added.

A5.3.1.3 POPULATION INCREASE

At this point also add an additional 4 Population and bring back one destroyed civilian ship with 2 Population. If no 2 Population ship has been destroyed bring back two civilian ships with 1 Population instead (or one, or none if there are less ships available).

A5.3.1.4 CRISIS DECK

Add the Pegasus Crisis Cards by shuffling them into the Crisis Deck.

A5.3.1.5 NEW OBJECTIVE

Remove Kobol from the stack of Objective Cards. New Caprica is now the objective.

A5.4 REACHING NEW CAPRICA

New Caprica is reached at distance 5. At this point play moves to the New Caprica board (see rule 14. New Caprica).

A5.4.1 COLONY SHIPS

For the New Caprica phase, only those civilian ships in reserve are placed on the planet, those on the main game board stay with Galactica. In gameplay, this gives the humans a choice - if they use the Pilot's escort action to keep colony ships off the Galactica board, then they will have the whole colony fleet with them on New Caprica. However, if they choose not to escort them to safety (thus leaving them open to Cylon attack), any civilian ships on the main game board will stay with Galactica, and there will be less ships to ready and launch, increasing the chance of surviving New Caprica.

A5.4.2 AFTER NEW CAPRICA

When the Admiral orders the fleet to jump away from New Caprica the game does not end and a normal jump procedure is instead carried out (as if the fleet had auto jumped). Immediately after the jump the player turn ends without any further steps and the following applies:

A5.4.2.1 SLEEPER AGENT PHASE

Carry out the Sleeper Agent phase.

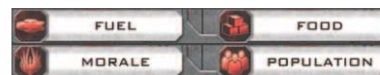

A5.4.2.2 NEW CHARACTERS

The following characters become available as replacement characters:

- Lee Adama (Political Leader)
- Gaius Baltar (Support)
- Tom Zarek (Military Leader)

A5.4.2.3 MORALE ADJUSTMENT

Morale is now adjusted by adding the current population number and subtracting eight [e.g. morale=4, population = 11; new morale = 4 + 11 - 8 = 7]. Thematically, the idea is that morale has increased because the humans have survived with so many of their population intact. If, on the other hand, population is low, morale will suffer.

A5.4.2.4 FOOD AND FUEL REPLENISHMENT

Count how many Destination cards have been played since the start of the game. That is how many points are available to add to either Food or Fuel (or a bit of both) as the Admiral sees fit. Thematically, the more places visited, the more chances of additional resources/technologies to be discovered. In gameplay, the players have a choice of choosing many short jumps for a large Food/Fuel boost, or picking "2" or "3" distance jumps (where available) but losing out on refuelling.

A5.4.2.5 CRISIS DECK

The New Caprica Crisis Deck is removed from the game and the standard Crisis deck is again used. Add the Exodus Crisis Cards by shuffling them into the Crisis Deck.

A5.4.2.6 NEW OBJECTIVE

Remove New Caprica from the stack of Objective Cards. The Ionian Nebula is now the objective.

A5.4.2.7 THE CYLON PURSUIT TRACK

Reset the Cylon pursuit track.

A5.5 REACHING THE IONIAN NEBULA

After New Caprica, the fleet will head on towards the Ionian Nebula with the Crossroads phase at 8 distance.

A5.5.1 CROSSROADS ELIMINATIONS

Any player whose character was eliminated during Crossroads is no longer out of the game. A human player will instead choose a new character, while Cylon players discard all skill cards and Super Crisis cards and move to the "Resurrection Ship" (or "Hub Destroyed") without being boxed. Cylon Leaders choose a new Cylon Leader.

For every Cylon player who would have been boxed increase human morale by one.

A5.5.2 AFTER THE IONIAN NEBULA

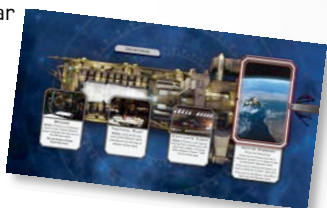

Immediately after the player turn during which the Crossroads phase was carried out, the following applies:

A5.5.2.1 TRAUMA AND ALLIES

Remove Trauma tokens and Allies from the game, they will not be used during the final part of the game.

A5.5.2.2 ALTERNATE BASESTAR DAMAGE TOKENS

Remove the Alternate Basestar Damage Tokens and replace them with the standard tokens.

A5.5.2.3 THE DEMETRIUS

Add the Demetrius board.

A5.5.2.4 FOOD AND FUEL REPLENISHMENT

Count how many Destination cards have been played after New Caprica. That is how many points are available to add to either Food or Fuel (or a bit of both) as the Admiral sees fit.

A5.5.2.5 CRISIS DECK

Add the Daybreak Crisis Cards by shuffling them into the Crisis Deck.

A5.5.2.6 NEW OBJECTIVE

Remove the Ionian Nebula from the stack of Objective Cards. Earth is now the objective.

A5.6 REACHING EARTH

Earth will finally be reached with one final jump after 13 distance at which point the game is over and the winning side is determined.

BSG CAMPAIGN CHART

Distance	Objective Reached	Game Boards Added	Special Phase	Characters Added	Other
3	Kobol	Pegasus		Helena Cain Louis Hoshi Karl "Helo" Agathon (Pilot)	+ Population
5	New Caprica	New Caprica	New Caprica phase Sleeper Agent phase	Lee Adama (Political Leader) Gaius Baltar (Support) Tom Zarek (Military Leader)	+/- Morale + Fuel + Food
8	Ionian Nebula	Demetrius	Crossroads phase		+ Fuel + Food
13	Earth		End Game		

VERSION HISTORY

VERSION 2.0

Version 2.0 of the Combined Rulebook was released in July 2025.

The rules were numbered in cases to assist cross referencing. The references were hyperlinked in the pdf version of the rules.

The Component and Set Up sections were moved to an appendix. All component specific clarifications were moved to the appendix.

Errata and clarifications from the official 2.1 FAQ were added.

The Complete BSG Quick Reference sheets were updated to reflect the changes to the main document. A separate Cylon Quick Reference sheet was added.

Variants for Character Selection, the Research Lab and Pegasus were added.

Several rules were edited for clarity.

VERSION 1.0

Version 1.0 of the Combined Rulebook was edited and updated by Kris Vanhoyland and released in January 2025.

The content from the final FAQ v2.1 from March 2015 was added.

An additional appendix with some miscellaneous FAQ content was added for completionism.

Component numbers were updated to better reflect actual quantities after removal of cards and/or components.

Various minor corrections were made.

VERSION 0.9

Version 0.9 of the Combined Rulebook was released in February 2014.

The Four Destinations Campaign was removed and put in a separate rulebook.

The Cylon Attack Card variant was added.

Number of components were added.

Various small corrections and clarifications were made.

VERSION 0.8

Version 0.8 of the Combined Rulebook was released in September 2013.

In version 0.8 the Daybreak Expansion was incorporated. This meant some rules (like the Sympathizer) were removed, while others were extensively modified.

A new "End Game" section was added.

The Complete BSG Quick Reference card was updated to version 0.8 to reflect the changes to this document.

The Three Destinations Campaign variant by Chris Malme was updated to the Four Destinations Campaign.

Various small corrections to formatting were made.

VERSION 0.7

Version 0.7 of the Combined Rulebook was released in April 2013.

In version 0.7 a few paragraphs regarding the use of the Basestar Bridge locations were duplicated in some places to make them easier to find.

The new Three Destinations Campaign variant by Chris Malme was added.

VERSION 0.6

Version 0.6 of the Combined Rulebook was released in June 2012.

VERSION 0.5

Version 0.5 of the Combined Rulebook was released in July 2011.

“Sometimes, we must embrace that which opens up to us. Life can be a curse, as well as a blessing. You will believe me when I say that there are far worse things than death in this world.”
– Gaius Baltar

The original battlestars were space-going leviathans of more than 1,440 meters in length, designed to tackle the Cylon threat head on. They featured powerful gun batteries that ran up the center of the hull, numerous point defense turrets, and many missile silos, but their main show of force came from the multiple Viper stacks housed in the flight pods, which held up to a thousand Vipers. Initially, these stacks ran multiple stories, but were removed as the war died down.
